

LIQUID MASK: HOW-TO / USES

WHAT'S LIQUID MASKING?

Liquid masking is an alternate medium for masking tapes, it is formulated to mask curved areas, irregularly shaped, or tight areas that are impossible to cover with masking tapes.

Arkomp's liquid mask is waterbased, odorless, and is easy to work with straight out of the bottle.

APPLICATION:

Shake well before use.

Apply via hand brush, add a few drops of liquid mask to any plastic container and freely dip your brush and apply directly.

Or use the tip of the nozzle like a pen.

Drying times can vary from 5 to 30 minutes depending on how thick a layer was applied.

SAMPLES:

Precisely place liquid mask with your hand-brush.

We recommend thick layers for easier peeling.

SAMPLES:

Liquid masks also reach hard to reach places where masking tapes would be impractical.

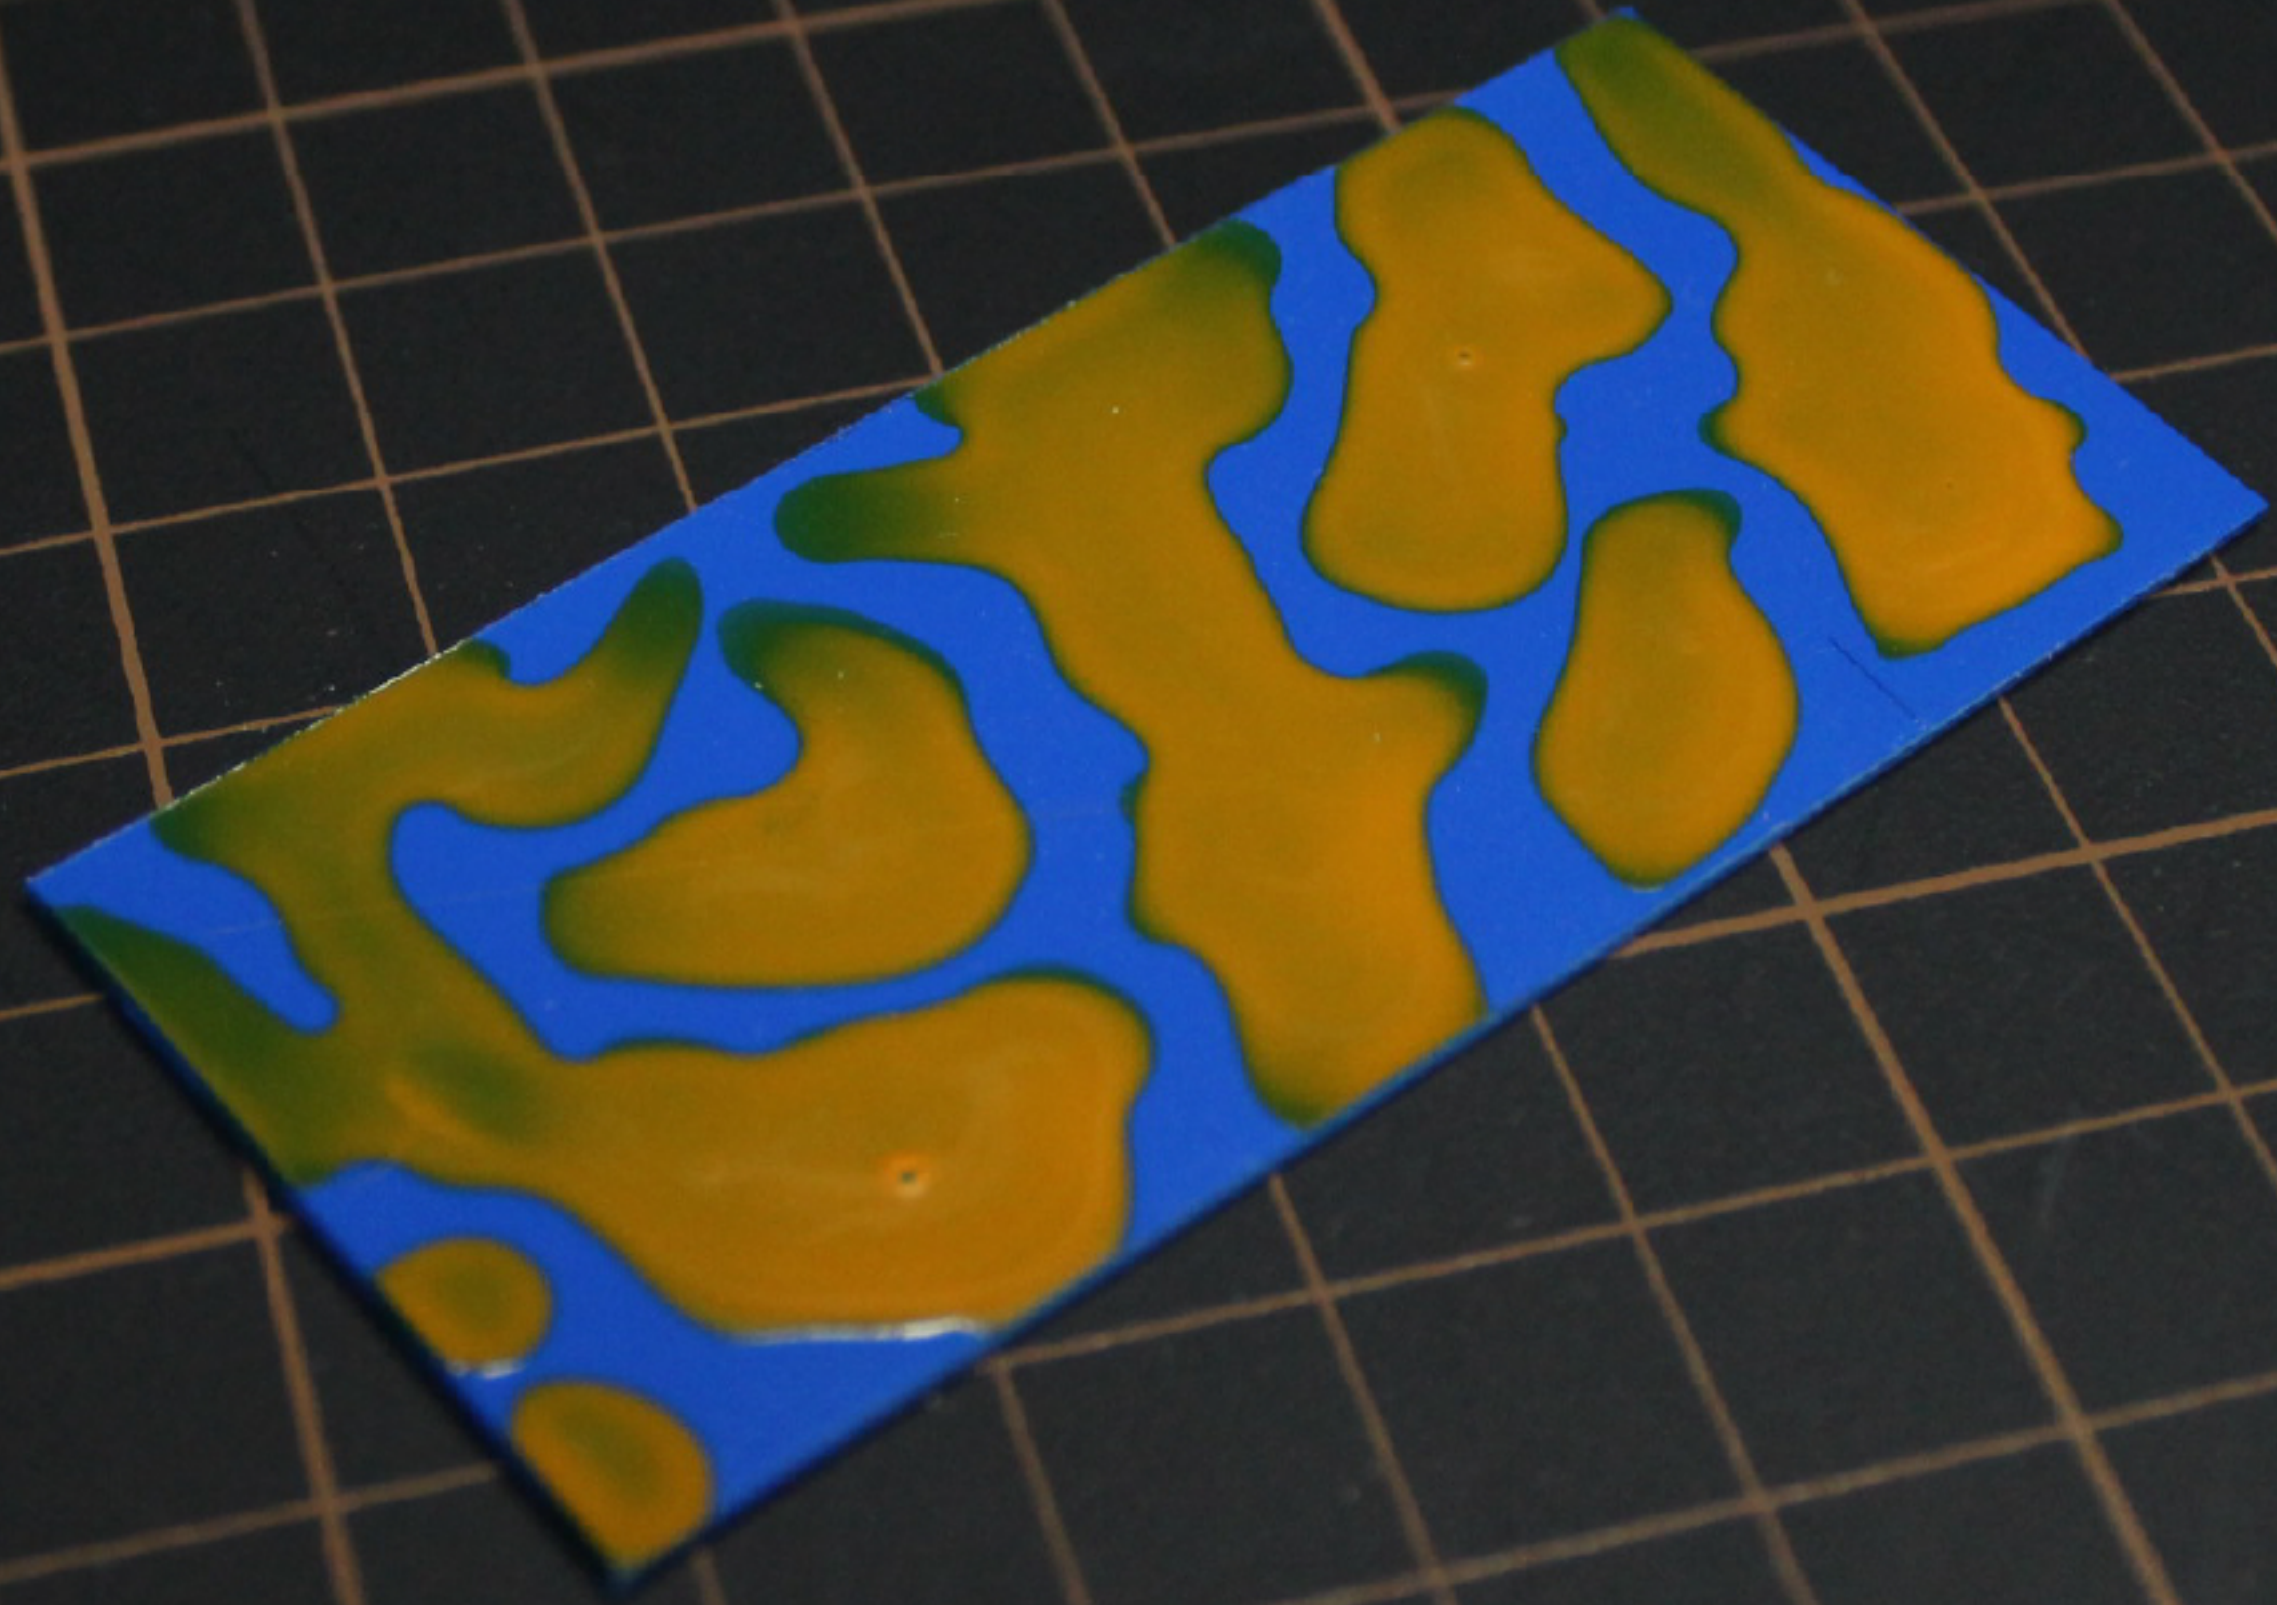

SAMPLES:

Works great as well for circular parts, cut down time consumed on masking too.

SAMPLES:

Easily create camo patterns via using the nozzle.
